## Din Rail AC Power Surge Protector

### DS25xVG-120, DS25xVG-300

DS250VG-120

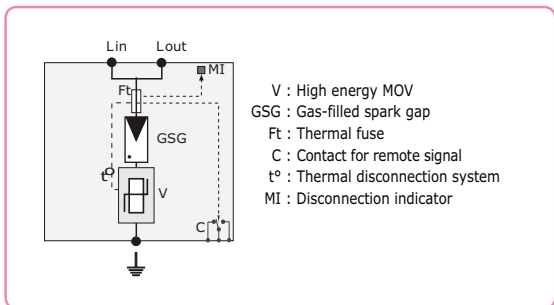

DS250VG is a heavy duty AC Surge Protection Device (SPD) for high risk, low tolerance electrical service entrance applications. The DS250VG provides protection against the direct and indirect effects of lightning and is particularly useful in a high lightning area where the risk of heavy surge current or even direct strike is high, i.e. buildings equipped with lightning rods.

The DS250VG is a one pole module that can be configured for both common and differential mode protection in any single or three phase application to 277/480Vac.

The DS250VG incorporates a patented MOV-GSG hybrid protection circuit that allows for very high surge current handling 25kA 10/350us, no leakage current to ground, no follow on current and the industry's lowest residual clamp voltages. The module is din rail mountable with dual terminal connectors for in-line wiring up to 250A. The DS250VG include integral thermal disconnection compliant to UL-60691, a visual fault indicator as well as remote signalization.
